

Sarcoidosis

Volunteers with Pulmonary Sarcoidosis Needed for Breathing Study

This is a study to see if your breathing improves with the use of four antibiotics called the oral CLEAR therapy. Initial study results show improved breathing in patients who were able to participate.

Your enrollment will help us determine the effectiveness of this treatment for future use.

You may be eligible to take part if you are:

1. Diagnosed with pulmonary sarcoidosis
2. 18 years of age or older
3. Have confirmed disease progression

If you or any of your love ones have been diagnosed with SARCOIDOSIS, please consider participating in the study by calling:

**Vanderbilt University Medical
Center, TN**

Amy Kerrigan: 615-343-3238
