

# CDC Coalition

April 9, 2025

The Honorable Robert Aderholt  
Chair  
House Appropriations Subcommittee  
on Labor, Health and Human Services,  
Education, and Related Agencies  
Washington, DC 20515

The Honorable Rosa DeLauro  
Ranking Member  
House Appropriations Subcommittee  
on Labor, Health and Human Services,  
Education, and Related Agencies  
Washington, DC 20515

The Honorable Shelley Moore Capito  
Chair  
Senate Appropriations Subcommittee  
on Labor, Health and Human Services,  
Education, and Related Agencies  
Washington, DC 20510

The Honorable Tammy Baldwin  
Ranking Member  
Senate Appropriations Subcommittee  
on Labor, Health and Human Services,  
Education, and Related Agencies  
Washington, DC 20510

Dear Chairs Aderholt and Capito and Ranking Members DeLauro and Baldwin:

The 219 undersigned members of the CDC Coalition and other supporting state, national and academic organizations urge you to include **\$11.581 billion for the Centers for Disease Control and Prevention's programs in the FY 2026 Labor, Health and Human Services, Education and Related Agencies appropriations bill**. Due to years of underfunding, many of CDC's most effective prevention programs are not reaching all states and communities, hampering efforts to achieve the greatest possible health outcomes across the nation. In addition to advocating for a stronger public health system at all levels of government, our organizations will strongly oppose any efforts to cut funding or dismantle critical CDC centers or programs or attach damaging policy riders to the bill, all of which would threaten the health and wellbeing of communities in every state.

We are extremely concerned that several recent actions by the administration will significantly weaken CDC, the rest of the nation's public health system and our efforts to combat many of the leading causes of death and disability in the nation. This includes the claw-back of more than \$11 billion in previously appropriated funding to our state and local health departments and an unworkable reorganization of CDC that eliminates thousands of important positions at the agency and critical programs to address chronic diseases, infectious diseases, injury and violence, occupational health and safety, healthy births, childhood disabilities, developmental disabilities, oral health and prevention of global health threats among others.

It is notable that nearly 80% of CDC's domestic budget supports public health and prevention activities through state, tribal, local and territorial health organizations and agencies, national public health partners and academic institutions.

The CDC Coalition is a nonpartisan coalition of organizations committed to strengthening our nation's public health infrastructure and prevention programs. Our mission is to ensure that health promotion and disease prevention are given top priority in federal funding, to support a funding level for CDC that enables it to carry out its prevention mission and to ensure an

adequate translation of new research into effective state and local programs. Coalition member groups represent millions of public health workers, researchers, clinicians, educators, academic institutions, health policy advocates, patients and individuals and families served by CDC programs.

The agency plays a leading role in detecting and mitigating disease outbreaks in the U.S. and globally. CDC is currently monitoring and investigating the measles cases and outbreaks impacting 22 states that have resulted in at least 607 cases and two confirmed deaths, the H5 bird flu outbreaks in poultry and U.S. dairy cows that have now resulted in at least 70 recent human cases and one confirmed death, and other disease outbreaks in the U.S. and internationally. CDC also leads the nation's efforts for pandemic flu and other public health preparedness activities and is the nation's – and a global – expert resource and response center, coordinating communications and action and serving as the laboratory reference center. States, communities and international partners rely on CDC for accurate information, direction and resources to ensure they can prepare, respond and recover from a crisis or disease outbreak.

CDC is also faced with other unprecedented challenges and responsibilities, including chronic disease prevention. Chronic and mental health conditions account for 90% of the country's \$4.5 trillion in annual health care costs, and many of these are preventable with appropriate support. As repeated outbreaks and emergencies have demonstrated, chronic diseases and infectious diseases are inextricably linked. Good underlying health is a critical component to preventing severe infection and death from communicable diseases. CDC's experts and programs work in a closely coordinated manner to protect all of our communities from these multifaceted threats.

CDC addresses the leading causes of death and disability by supporting this critical work across the country and in every state. No other federal agency or private entity can substitute for the expertise, technical assistance, data and research that CDC provides to jurisdiction and partners. CDC funds programs for strengthening public health infrastructure at all levels; public health emergency preparedness at all levels; strengthening and expanding the public health workforce; injury prevention; suicide prevention, including among the nation's veterans; global health security; health promotion in schools and workplaces; the prevention of diabetes, heart disease, stroke, cancer, lung disease and other chronic diseases; tobacco prevention and control; nutrition and physical activity; immunizations; HIV, STI, tuberculosis and hepatitis prevention; prevention of vector-borne diseases; environmental health, including the prevention of childhood lead poisoning and implementing community-based climate and severe weather adaptation strategies; oral health; reducing health disparities; preventing maternal and infant mortality and improving birth outcomes; sickle cell disease data collection; preventing antimicrobial resistance; drug overdose prevention; improving the health and quality of life of individuals with disabilities; Alzheimer's disease prevention and awareness; vision and eye health, public health research and health statistics and harmonizing clinical laboratory test results.

In addition to ensuring a strong public health infrastructure and protecting our communities from public health threats and emergencies, CDC programs are crucial to reducing health care costs. Despite the progress CDC has made to meet these needs, the agency's programs remain underfunded. **We urge you to include at least \$11.581 billion for CDC's programs in the FY 2026 Labor, Health and Human Services, Education and Related Agencies appropriations bill and to reject any efforts to dismantle the agency or eliminate any of its essential public health programs.**
